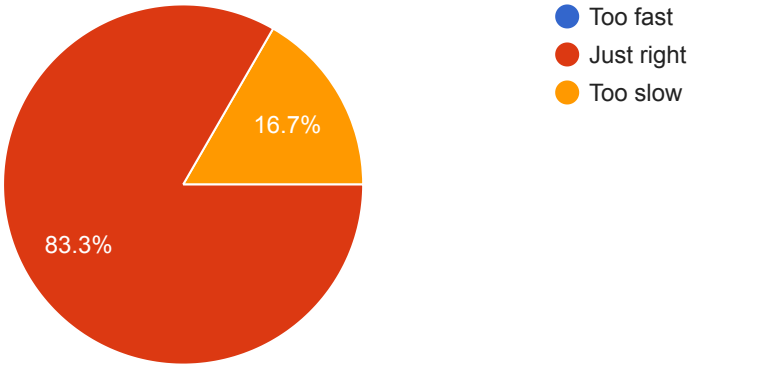
The instructor moved at an appropriate pace?

6 responses



Why did you attend this course?

6 responses

I think it's a very helpful tool for project management and version control is important, especially when working on the same project with different people.

Have a first Idea of how to use GitHub

I expected to discover Github and learn a little bit how it is working and for what we can use it.

Learning guthub

Wanted to get a first insight on how to use Github

Since this was a great opportunity to know about Githab, on which I have zero knowledge

What is your research field?

Would you recommend this course to others? Why?

6 responses

Yes, the course was a great introduction into how Git and Github works. Even if there was not much knowledge before on github and working with git bash. Deepak was very helpful and explained it well!

to have a first broad idea of what is github yes

Yes

Too slow paced

If you are a GitHub beginner yes.

To get an idea how Github works, yes.

Additional comments or suggestions about this course.

3 responses

maybe it would be nice to have concrete examples on how to implement this in a lab, or like more concrete stuff and applications

Perhaps to plain 1h15-1h30 every time to have more flexibility in the schedule of the day but not sure people will take or have time for a longer session.

It was a great opportunity to know about Github. Would have even been better if the exercise were on the theme more practical for our work. Version control of the document is great, but to be honest, I could not see the merit of using Github over Google docs, especially when Github requires understanding of complicated commands from all the users.

General Comments about the DQBM

1 response

I appreciate it a lot that the DQBM offers these kinds of further education!

Other topics you would like to see offered.

2 responses

Personally I would also be interested in data analysis topics using R and different specific packages.

Statistics for biologists, R but also general statistics

If you would like to contribute to further improve the course, please leave your email.
